

F-11 MODEM SETUP GUIDE

This guide is designed to show you how to properly setup the F-11 self hosting modem.

The first thing you will need to do before getting started is to make sure that you have Windows Firewall off. This will ensure that you will be successful at communicating with the modem.

The next step after unpacking the modem and plugging in the ac adapter is to make sure you use the included network patch cable. It is very important that you use the included cable because it is a cross over cable and no other cable type will work properly.

Plug the cable into the F-11 and then into your network Interface card (NIC) jack. You will notice on the F-11 That there are two jacks available. One is the RJ-11 standard telephone jack and the RJ-45 standard network jack which looks very similar but is much larger.

It is not necessary to have the phone line and the coax cable hooked up to the F-11 to complete the setup. However, you will need to hook up all the cables in order to be able to access the internet.

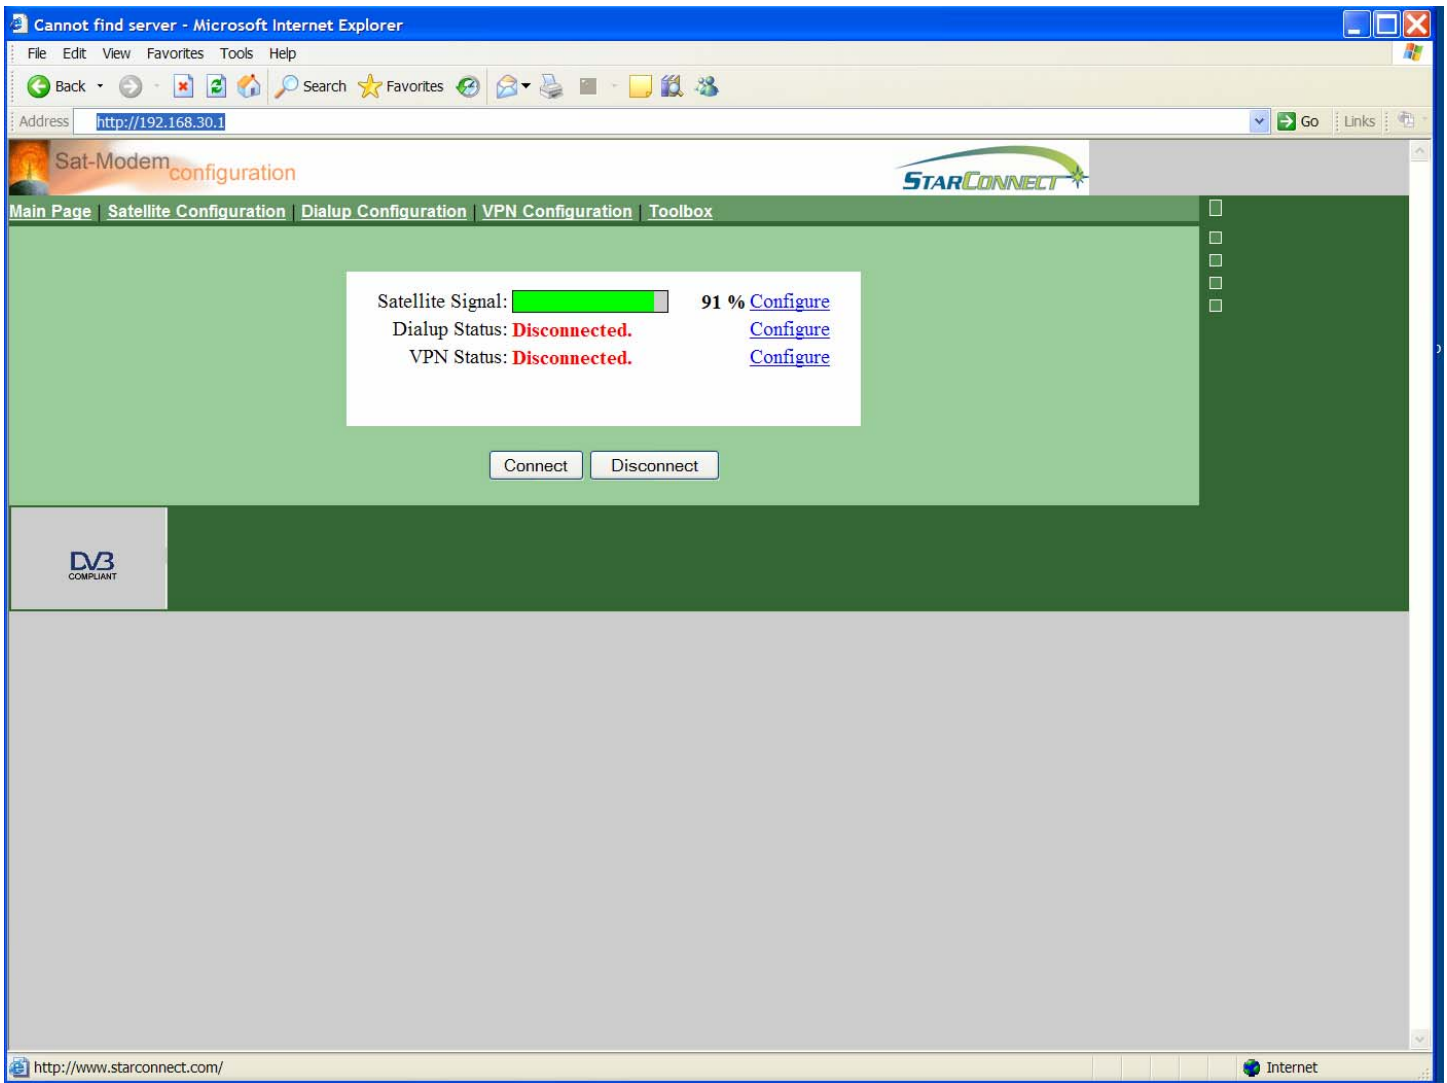

Fig 1

1. Open Internet Explorer and type the following into the address bar: **http://192.168.30.1** and hit enter. This will bring you to the main setup page in **Fig 1**.
2. Click the **Dialup Configuration** link at the top.

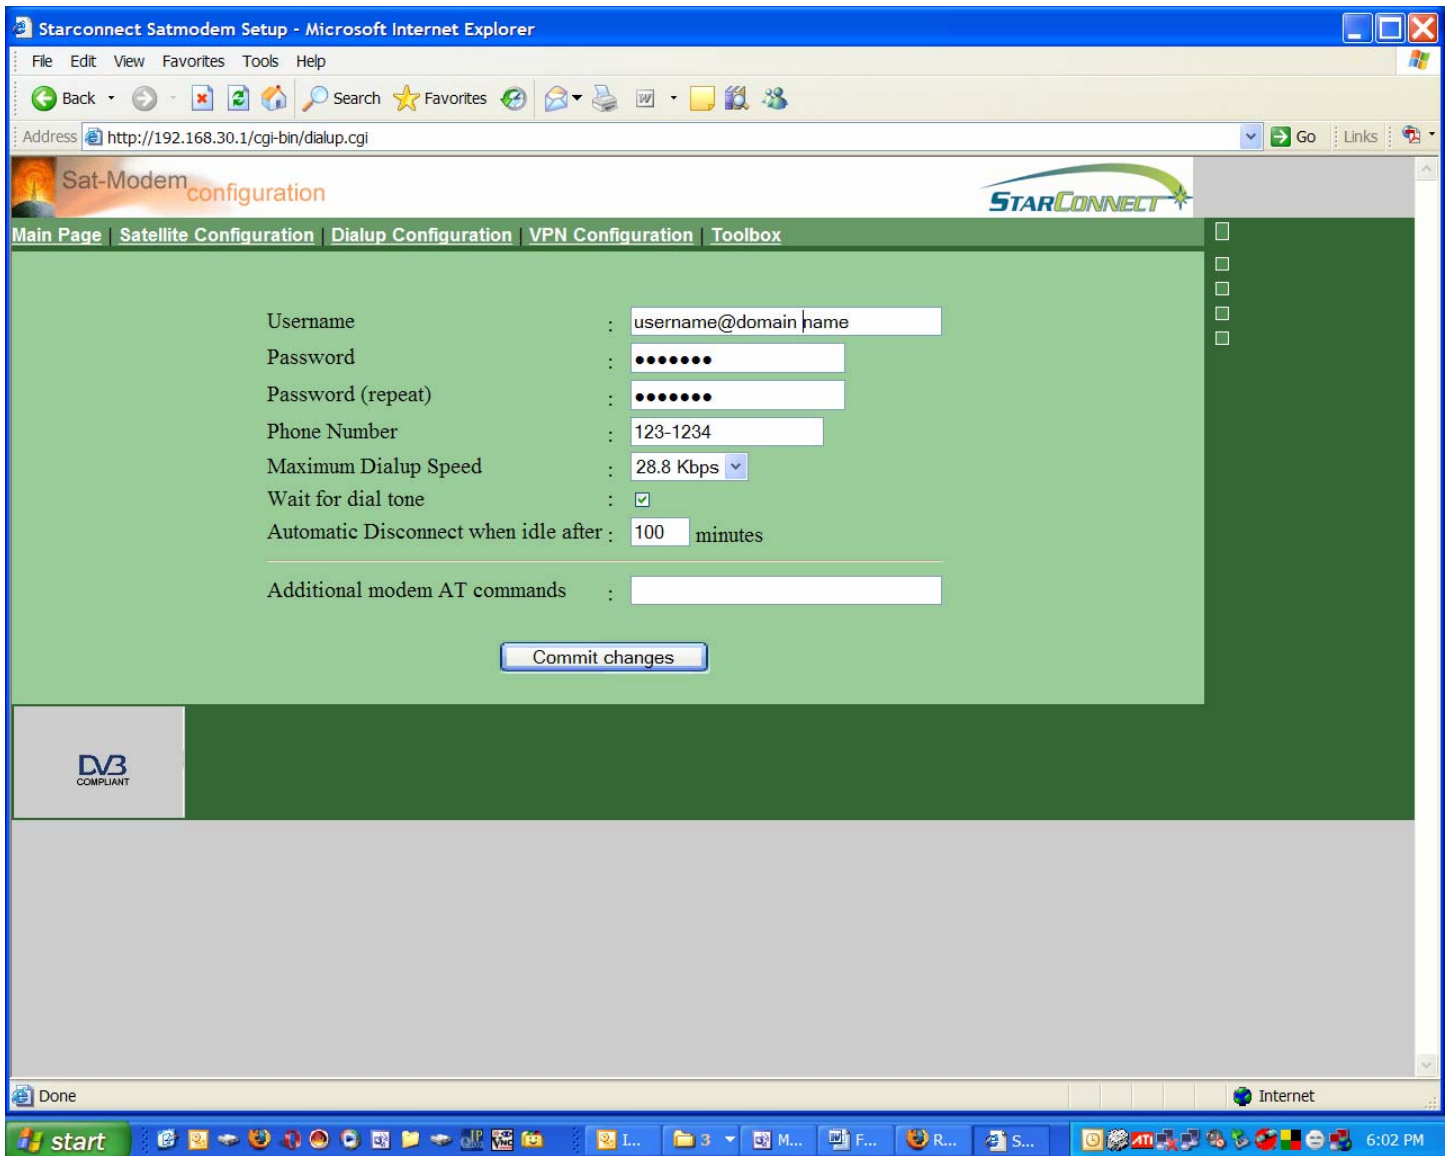

FIG 2

3. Put the user name you have been provided in the **User Name** field.
4. Put your password in the **Password** field and repeat.
5. Put your dialup phone number in the **Phone Number** field.
6. Put **28.8Kbps** in the **Maximum Dialup Speed** field.
7. Put 100 minutes in the **Automatic Disconnect** field.
8. Click **Commit changes**

***Please note that you may put *70, in front of your dialup phone number if you wish to disable call waiting.**

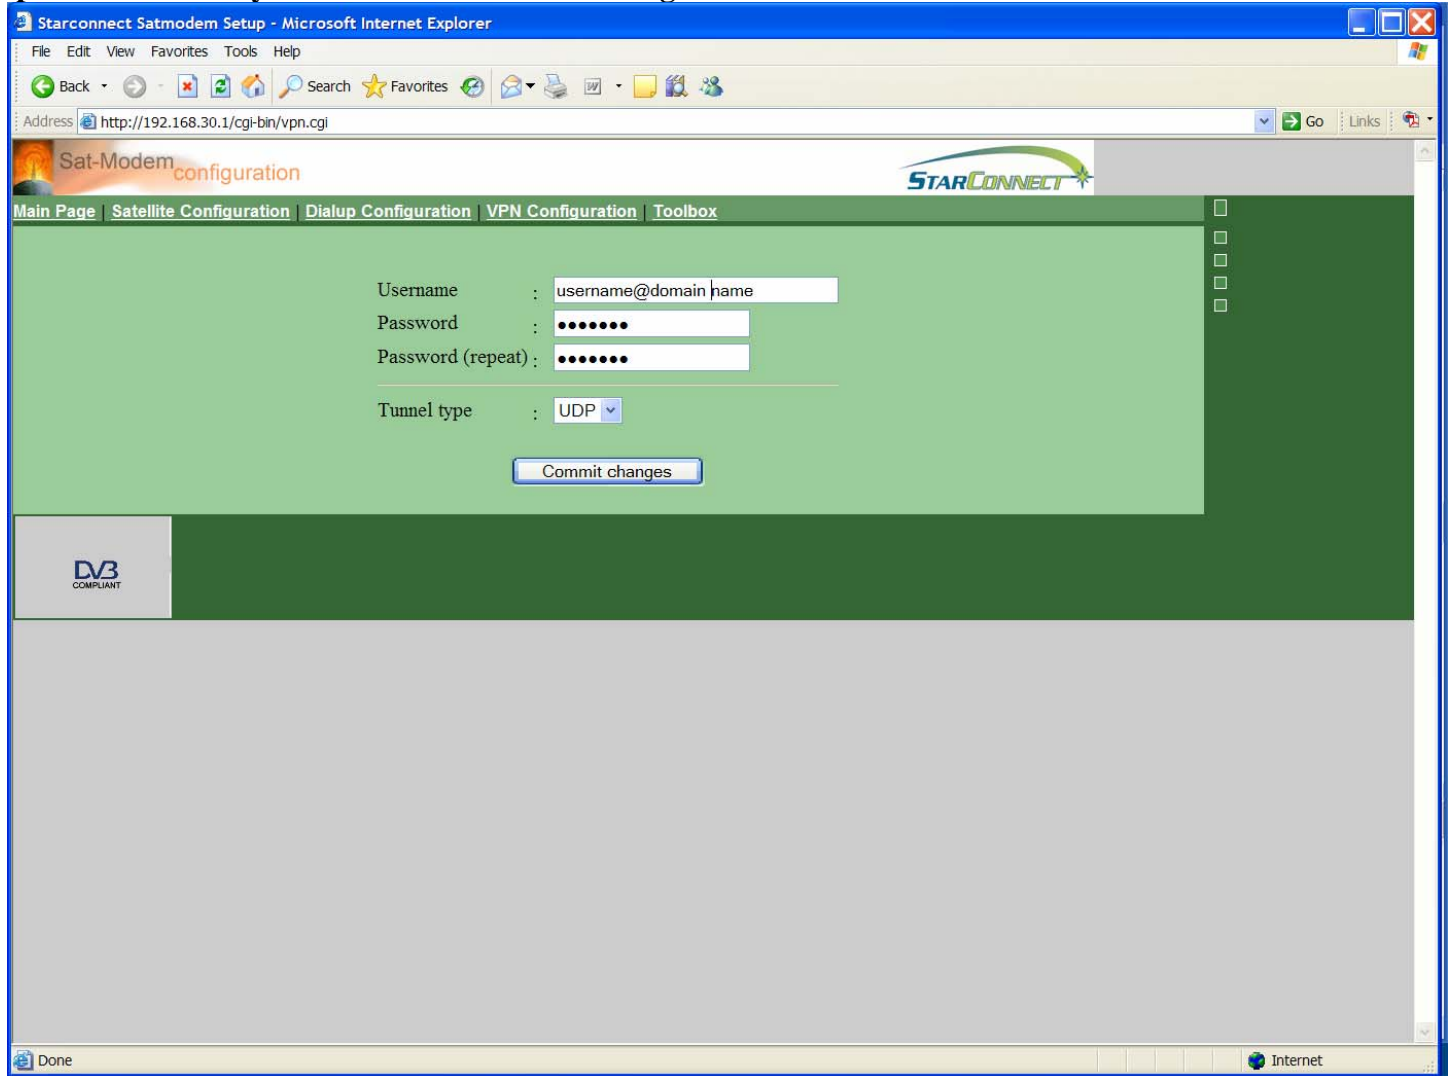

FIG 3

9. Click the **VPN Configuration** link at the top of the page.
10. Put your user name@ your domain name in the **User Name** field
11. Put your password in the **Password** field and repeat.
12. Put **UDP** in the **Tunnel Type** drop down field.
13. Click **Commit changes**.
14. Once you have completed these steps, click the Main Page link at the top of the page.

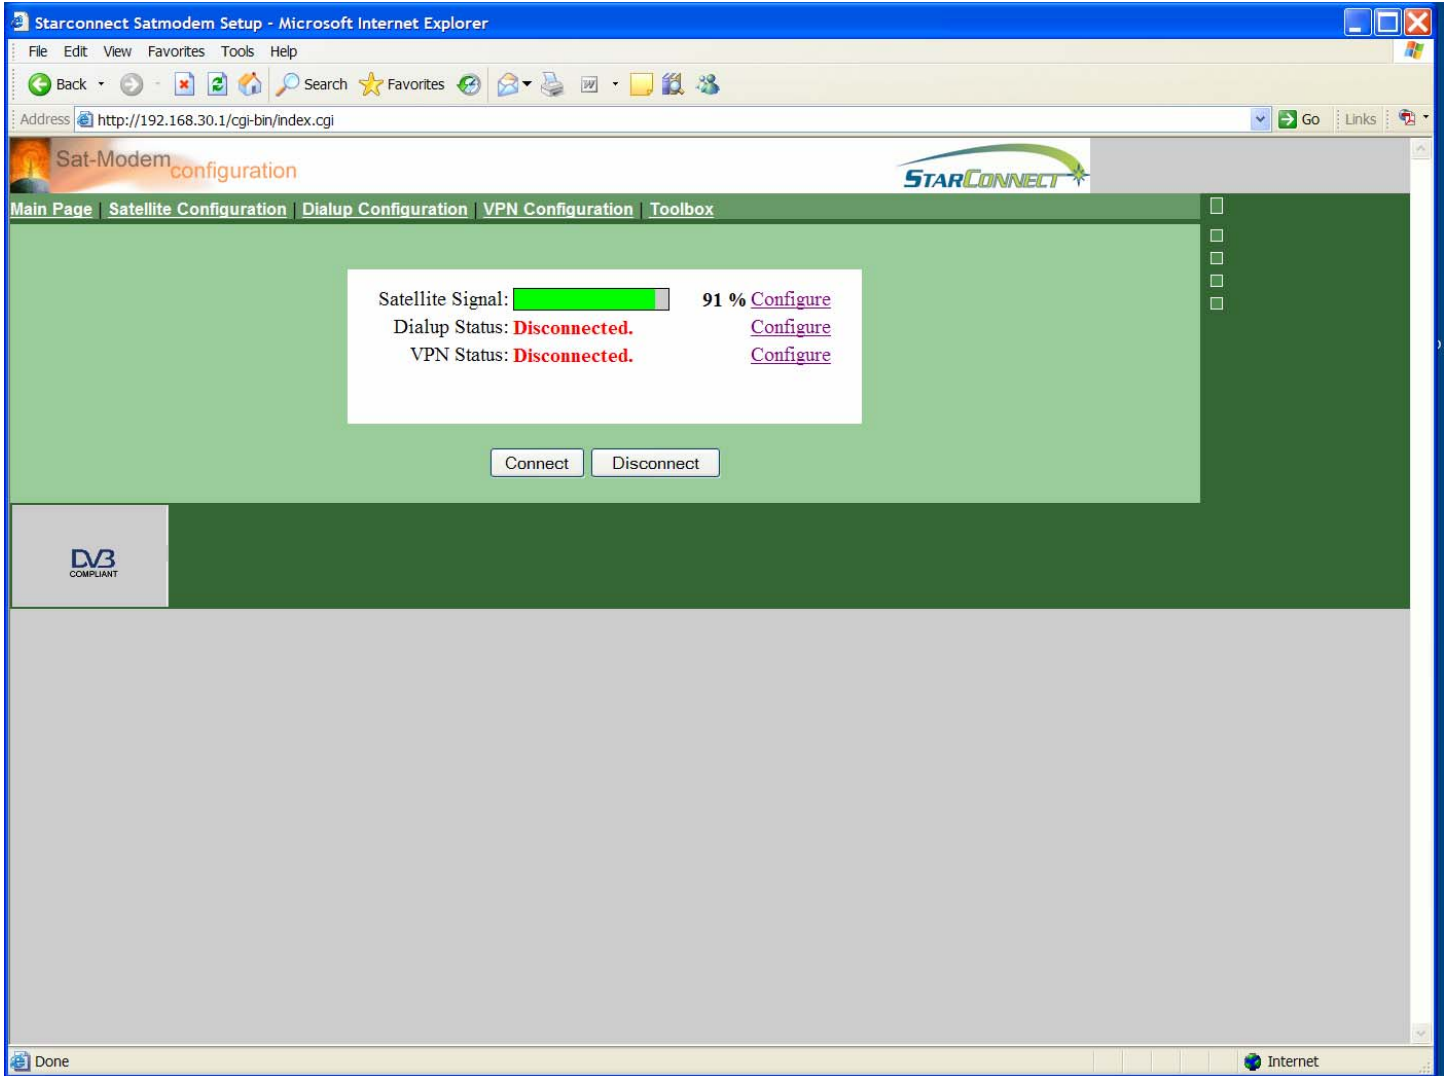

FIG 4

15. Go to your Favorites at the top of the web browser page and save the F-11 main page as a favorite.
16. Go to your favorites list and copy the F-11 favorite you just created and save it to your desktop for quick access to the F-11 main page.
17. Click connect and the dial up connection will occur first followed by the VPN connection. Once both connections say **Online** in **FIG 5** below, you are ready to start your high speed web surfing experience.
